Drying cabinets, ironing board cabinets, utility sinks and dehumidifiers. All manufactured in Sweden.
Cabinet control
All of our Eco drying cabinets use either heat pump technology or extract air technology with sensor control. This means that you don’t have to think about either power levels or time. When the laundry is dry, the drying cabinet turns off – completely automatically. To find these drying cabinets, look for the Eco Dryer label!

New clothes – every wash.

Nimo’s products are all manufactured in Sweden. For more than 50 years we have manufactured the products that help you look after your clothes so they last longer.

In this brochure we present these products so that you can easily choose from the market’s widest range of energy-efficient drying cabinets, ironing board cabinets and utility sinks for both home and professional environments.
Hurrah for the drying cabinet!

There are many ways of drying wet clothes. But only one is energy efficient and gentle. A drying cabinet from Nimo dries your clothes in the best possible way.

A drying cabinet dries everything from wet shoes and dirty children’s snowsuits to your most delicate garments. Nimo’s drying cabinets with ECO Dryer technology have built-in humidity sensors which shut off the unit when the clothes are dry.

Our drying cabinet with heat pump technology, the ECO Dryer 2.0 HP, goes even further and offers the market’s most energy-efficient way of drying wet laundry. It has even won awards for “Lowest price per dry” and “Most electrical energy-efficient drying equipment”.

Every garment in the drying cabinet

There are garments which cannot be tumble dried: they shrink, become crumpled or quite simply ruined. The symbol on the care label says that it can’t be tumble dried, but you won’t find a ‘do not use drying cabinet’ symbol. Because you can dry everything in a drying cabinet: exercise clothes, snowsuits, shirts, blouses and skirts – everything!

If you want to take extra care of your clothes, a drying cabinet is the safest drying choice. A sensor-controlled drying cabinet also makes your clothes smoother and pleasantly warm when you take them out of the cabinet (you can never over-dry your garments).
Choose your drying cabinet

We have drying cabinets of different types and in different price classes. The difference lies primarily in how energy-efficient they are and where they should be installed.

Choose between heat pump technology or extract air technology which is sensor or timer-controlled.

Heat pump hero

Our most energy-efficient drying cabinet is based upon heat pump technology and requires no extract air connection. Overall, the ECO Dryer 2.0 HP is the market’s most effective, quietest and most energy-efficient drying cabinet: using 65% less energy than a traditional drying cabinet. So it’s good for the environment, simple to install and easy on your wallet!

The intelligent cabinet with sensor control

The great thing about this drying cabinet is the sensor control, which means it turns off automatically when the laundry is dry. It has three pull-out, folding hangers and the warm moist air is led away through the ventilation duct on top of the cabinet. Our intelligent drying cabinet is our most popular because the sensor control system gives a significantly lower energy consumption than traditional drying cabinets.

Traditional drying cabinet with timer

A real classic! Here you decide both time and temperature. And when you use it right, a drying cabinet with a timer is a prudent budget choice. For example, a half full cabinet of garments is dry in only 1-2 hours on half power. The ETS 1900 is an easy-to-position timer cabinet with pull-out, folding hangers. The warm moist air is led out through the ventilation duct on the top of the cabinet.

Fitting levels

Bas, Extreme or Bod

Our most common drying cabinet has three different fitting levels.

Bas
Perfect for the family!

Extreme
Perfect for preschools or ski cabins!

Bod
Perfect for the workplace!

Eco Dryer 2.0 HP Drying Cabinet

Floor standing, 1,930 mm

The award-winning Eco Dryer 2.0 HP is by far the market’s most effective, quietest and most energy-efficient drying cabinet. You save up to 65% energy compared with a traditional drying cabinet with timer. The drying cabinet uses heat pump technology and can be installed without an extract air duct. The drying cabinet is available in white in the fitting levels Bas, Extreme or Bod. Glove racks in the doors and shoe racks are included in all models.

Drying Cabinets ✦ Sensor-controlled Eco Heat Pump

Here the Eco Dryer 2.0 HP drying cabinet is combined with the NB 1000 TMS utility sink (page 21)

Drying Cabinets

ETS 1900 E Drying Cabinet
Floor standing, 1.915 mm
Floor standing model with three pull-out and foldable hangers. The warm moist air is led out through the ventilation duct on the top of the cabinet. The inside of the door is fitted with door hangers. Supplied with right or left hung door, which can even be altered retrospectively. The drying cabinet is equipped with sensor-controlled automatic shut-off and has two fixed programmes together with manual timer control. The sensor system means that the drying cabinet only uses as much energy as it needs.

ETS 1500 E Drying Cabinet
Wall-mounted, 1.435 mm
Wall-mounted model with pull-down hanger system for comfortable working height. The warm moist air is led out through the ventilation duct on the top or side of the cabinet. The drying cabinet fits perfectly in positions such as above the washing machine. The drying cabinet is equipped with sensor-controlled automatic shut-off and has two fixed programmes together with manual timer control. The sensor system means that the drying cabinet only uses as much energy as it needs.

ETS 1700 E Drying Cabinet
Floor standing, 1.715 mm
Floor standing model with three pull-out and foldable hangers. The warm moist air is led out through the ventilation duct on the top of the cabinet. The inside of the door is fitted with door hangers. Supplied with right or left hung door, which can even be altered retrospectively. The drying cabinet is equipped with sensor-controlled automatic shut-off and has two fixed programmes together with manual timer control. The sensor system means that the drying cabinet only uses as much energy as it needs.

Convenient but concealed.

Can a usable product be attractive? Of course it can! The solution: a wall-mounted ironing board cabinet.

The ironing board is usually hidden away when not in use, perhaps because it is not very attractive. But it is extremely practical and is used often. With a wall-mounted ironing board cabinet, you can easily unfold, iron and then conceal your ironing board. The cabinet has a timer and space for both the ironing board and accessories. It doesn’t get better or more attractive than this!

On the one hand, or on the other
The ironing boards in our ironing board cabinets can be raised, lowered and turned so that you can easily iron from any side. You can also choose whether the door on the ironing board cabinet is right or left hung. This means that you can position the ironing board cabinet where it suits you best.

IronMaid®
Wall-mounted. 1,313 mm
The ironing board can be rotated and height adjusted. The cabinet has space for your iron, which is connected to the built-in electrical outlet with timer function. IronMaid® is available in three different colours.

Utility thinking.

Your utility sink is the A–Z. This is where you sort the laundry, and where you fold it. So choose your utility sink carefully.

Do you have the space and the need for a large, small or in-between unit? Completely enclosed, partially enclosed or open? In white, black or titanium? We have utility sinks in many sizes, shapes and price classes. You choose! But regardless of which one you choose, your utility sink will always have the following:

- Height-adjustable legs
- A sink with a rounded base
- Stainless steel surfaces with non-drip edging

All enclosed utility sinks also have:

- Fully integrated plinths
- Doors with door dampers

Tough materials

In a laundry room, it’s often warm and rather humid. For this reason, all of Nimo’s utility sinks are manufactured in tough materials: they neither swell nor warp and are completely free from wood and fibre-based materials. They’re simply there, year after year, ready for use. We call that quality.

Hello, it’s Nimo here again. Some garments don’t need washing before you dry them. Such as wet shoes. On www.nimoverken.se/torkskolan you can find more of my top tips.

www.nimoverken.com
The silent, sensor-controlled FT 120 FL drying cabinet (page 28) is specially designed for laundry rooms in larger properties.
Big, strong and energy-efficient!

Nimo Pro presents the products that save money in small and medium laundry rooms...

...for example in tenant-owner associations, apartment blocks, schools, construction workplaces, riding arenas and ice rinks. Here many people wash and dry their clothes with the same equipment – often 24 hours a day. So we know that you’re looking for the highest quality products with long lifetimes and really low energy consumption. When you buy a drying cabinet from Nimo with heat pump technology, you can quickly earn back that investment. The Nimo Pro range includes drying cabinets, ironing boards, utility sinks, sinks, cold ironers, drying room dehumidifiers and other accessories that belong in a large laundry room.

Hello, it’s Nimo here. Drying cabinets with heat pump technology are closed systems and require no extract air connection. So as well as incredibly energy-efficient and silent drying, the drying cabinet can be positioned exactly where you want. On www.nimoverken.se/torkskolan you can find more of my top tips.

All of our Nimo Pro drying cabinets either use heat pump technology or extract air technology with sensor control. They are so energy-efficient that you quickly earn back your investment in the property’s laundry room. Nimo Eco Dryer is a guarantee for both energy-efficient drying and money-saving.

The FT 120 FL has a swing out unit with 20 hangers in stainless steel and a touch panel which controls four automatic programmes.

The FT 120 FL has a swing out unit with 20 hangers in stainless steel and a touch panel which controls four automatic programmes.

**FT 120 VP Drying Cabinet**

**Floor standing. 2,060 mm**

The FT 120 VP Drying Cabinet is our most energy-efficient and effective drying cabinet, combining heat pump technology that gives exceptionally low running costs with high capacity and simple installation. The built-in lighting gives good illumination of the 20 fold-out hangers in stainless steel. The heat pump and all of the electronics are at the top, which facilitates servicing.

**FT 120 FL Drying Cabinet**

**Floor standing. 1,860 mm**

The sensor-controlled FT 120 FL is a quick-drying and energy-efficient drying cabinet with extract air technology. The cabinet works using underpressure, which eliminates leakage of air into the surrounding room. The built-in lighting gives good illumination of the 20 fold-out hangers in stainless steel. The fluff filter and all of the electronics are in the top section of the cabinet, which facilitates servicing.

* Suitable for disabled users. Touch panel for disabled use positioned in the centre of the right hand door for easy access.
FT 60 VP/Eco Dryer 2.0 HP
Floor standing, 1.930 mm
The FT 60 VP/Eco Dryer 2.0 HP drying cabinet is by far the market’s most effective, quiet and energy-efficient drying cabinet, which dries laundry completely without radiators. The heat pump technology means that the drying cabinet does not require any extract air connection, which makes it much easier to install. Supplied with three hangers, two glove racks and a shoe rack.

| Dim. (H x W x D) | 1030 × 595 × 675 mm |
| Weight | 95 kg |
| Protection class | IP24, SEMKO and CE approved |
| Capacity | Hanging length 16 metres, normal load 4 kg |
| Noise level | 52 dB(A) |
| Electrical connection | Normal wall outlet, one phase 230 V 10 A |
| Energy consumption | 1.3 kWh with normal load (4 kg*), down to 0.28 kW/kg with maximum load |

Drying system
Heat pump technology - requires no extract air ventilation. Condensation water container and integrated condensation hose included.
